

SEO Key Findings

1. Adding Meta Title and Description for ENHD Charts/ENCs

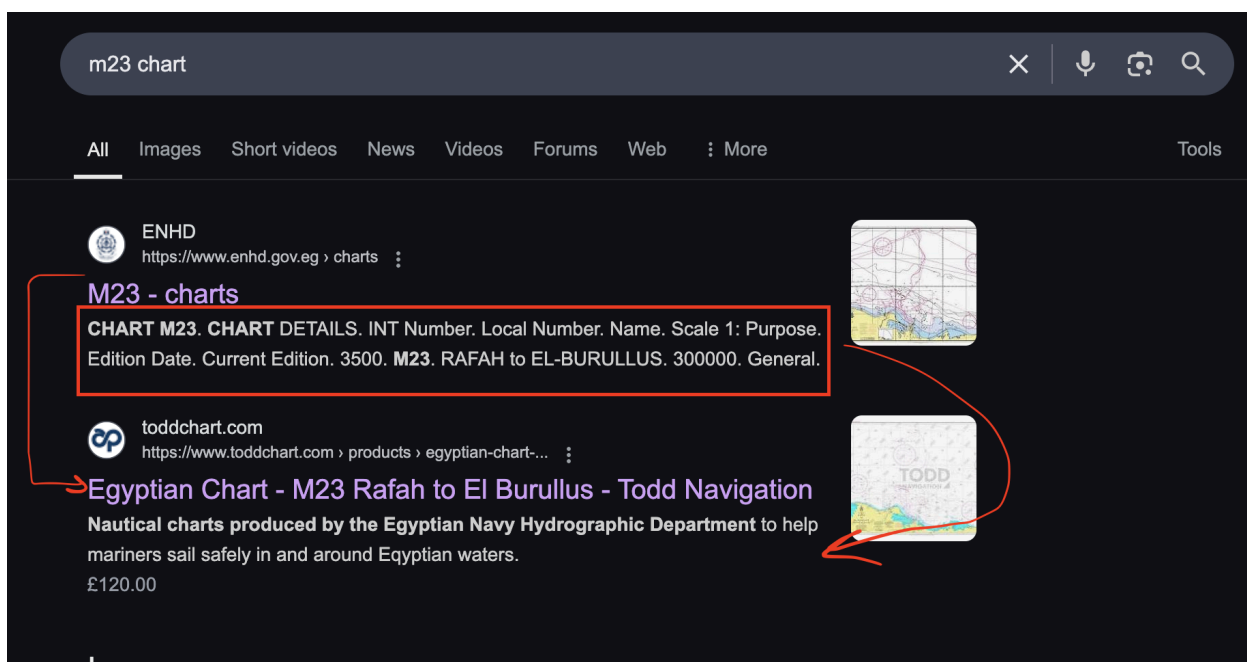

To optimize the individual pages for each ENHD chart and ENC, we need to make sure each page has a unique and relevant **meta title** and **meta description**. This will not only improve search engine rankings but also make the pages more enticing for users in search results.

Meta Title

The meta title should be concise, include the most important keyword, and represent the page content accurately. It should ideally be between **50-60 characters** to ensure it displays correctly in search results.

Examples of Meta Titles:

- **SC01 - Suez Canal Chart: Port Said to Great Bitter Lake | ENHD**
- **SC02 - Suez Canal Chart: Great Bitter Lake to Port of Suez | ENHD**
- **R11 - Port of Suez Chart | ENHD**

Meta Description

The meta description should provide a brief yet informative summary of the page content, encouraging users to click. It should include relevant keywords and be between **150-160 characters**. It should also emphasize the chart or ENC's role in safe navigation, especially if the user is searching for specific navigational data.

Examples of Meta Descriptions:

- **Explore the SC01 Suez Canal Chart from Port Said to Great Bitter Lake, providing essential navigation data for maritime safety in Egypt.**
- **Get the SC02 Suez Canal Chart for safe navigation from Great Bitter Lake to Port of Suez. Download now for updated nautical information.**
- **Access the R11 Port of Suez Chart from ENHD. Essential for port navigation with the latest hydrographic data and maritime safety information.**

New Paper Chart Edition Released: SC01 Suez Canal Chart – Updated for Safe Navigation

Introduction:

The Egyptian Navy Hydrographic Department (ENHD) is pleased to announce the release of an updated edition of the SC01 Suez Canal Chart. This edition covers the crucial stretch from Port Said to the Great Bitter Lake, incorporating essential updates to ensure the continued safety of maritime navigation through the Suez Canal.

Key Updates and Changes:

- Updated depth soundings in the Port Said area.
- Repositioned buoys in the New Expansion Channel.
- Removal of outdated navigational hazards near El Tamsah Lake.

Why This Is Important:

It is essential for vessels operating in the Suez Canal to use the most up-to-date navigational charts. The latest edition of the SC01 chart provides vital updated data for areas of the Suez Canal, ensuring safe and efficient navigation for all maritime operations.

Conclusion:

We encourage all mariners to stay informed and use the most current ENHD charts to maintain safe navigation in Egyptian waters. For more updates on future chart editions and maritime safety information, continue to follow the Egyptian Navy Hydrographic Department.

Disclaimer:

Please note that chart updates are subject to change, and we recommend verifying the latest version with ENHD before navigation.

Notice 2025/01: Suez Canal Depth Update

Effective Date: May 1, 2025

Description:

This notice provides an update on the channel depth between Port Said and the Great Bitter Lake. Recent surveys show a reduction in depth in the southern section of the canal due to sedimentation. Mariners are advised to **proceed with caution** in this area to ensure safe navigation.

Chart Updates:

Please refer to the latest editions of the Suez Canal charts SC01 and SC02 for updated navigational changes.

Affected Areas:

- Suez Canal
- Port Said
- Great Bitter Lake
