System Issues Report Based on the current data, here are the system issues found, prioritized by severity: #### Critical Issues * **Devices with no recent ping**: There are **9** devices that have not pinged in the last 24 hours, which is a significant concern. These devices may be offline or experiencing connectivity issues, affecting the accuracy of animal tracking and monitoring. Please check the [Devices List](/devices) for more information. * **Low battery devices**: There is **1** device with a low battery, which may cause it to stop functioning soon. It's essential to replace or recharge the battery to prevent data loss. #### Moderate Issues * **Queue job failures**: No data is available on queue job failures. It's recommended to check the system logs for any errors or warnings related to queue jobs. * **Failed payment retries**: No data is available on failed payment retries. It's recommended to check the payment gateway logs for any errors or warnings related to payment processing. * **Warnings in recent system activity**: No data is available on recent system activity warnings. It's recommended to check the system logs for any warnings or errors. #### Recommendations * Investigate the **9** devices with no recent ping and take necessary actions to restore connectivity. * Replace or recharge the battery of the **1** device with a low battery. * Monitor system logs for any errors or warnings related to queue jobs, payment processing, and system activity. By addressing these issues, you can ensure the smooth operation of the system and prevent any potential disruptions to animal tracking and monitoring.
